Toronto, ON
(416) 464-8457 | ch.julian.so@gmail.com | LinkedIn | Github | julianso.com

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL
Technologies & Tools: React, NodeJS, Vite, Express, MongoDB, Jest, Git, PostgreSQL, SASS, TailwindCSS, Bash, Ubuntu terminal, pgAdmin4

PROJECTS

Battleship Game – GitHub
- Developed a Battleship game, implementing game logic, ship placement, attack validation, and win conditions.
- Implemented randomized ship placement on a 10×10 game board, validating ship positions and preventing overlapping or out-of-bounds placements.
- Developed a computer opponent with hunting and targeting logic, tracking previous attacks and adjusting its strategy based on successful hits.
- Separated game logic from UI components to improve code organization, maintainability, and testability.
- **Skills used:** React, TypeScript, JavaScript, vite, CSS

Pokemon Shopping Store App – Github
- Developed a multi-page e-commerce app, implementing nav between product listings and shopping cart views.
- Integrated the PokéAPI using asynchronous JavaScript (async/await) to retrieve and display external data.
- Built reusable React components and managed state to support dynamic rendering and shopping cart functionality.
- Organized the application into modular components to improve maintainability and simplify future enhancements.
- **Skills used:** React, React Router, JavaScript, CSS, API, SASS

Message Board App – Github
- Developed a full-stack messaging application following the MVC architectural pattern.
- Integrated REST APIs and Axios to retrieve and display messages dynamically without requiring page reloads.
- Implemented client-side data fetching and caching with React Query, alongside date-fns for formatting timestamps.
- Structured reusable React components and backend routes to support maintainability and separation of concerns.
- **Skills used:** React, JavaScript, vite, node, Tailwind, axios, PostgreSQL

PREVIOUS EXPERIENCE

Senior Financial Analyst, TouchBistro (SaaS, payments) | Toronto, ON 2024 – 2026
- *SQL & Data Analysis:* Queried Snowflake data warehouse using SQL to extract and analyze business metrics, customer counts, and partner performance for executive reporting and business analysis.
- *Data Visualization & KPI Reporting:* Developed Tableau dashboards to visualize payment trends, track transaction KPIs, and provide visibility into payment transactional activity.

Senior Analyst, Greentank Technologies (cannabis startup) | Toronto, ON 2020 – 2024
- *Business Intelligence & Data Visualization:* Built Power BI reports and dashboards to analyze SKU profitability, inventory break-even points, and pricing strategies providing insights across product, sales & marketing, and supply chain teams.
- *Large-Scale Data Analysis:* Analyzed large retail datasets to identify market trends and deliver insights to B2B clients, supporting customer retention and business decisions.
- *Analytical Problem-Solving:* Developed five-year financial forecasting model and presented assumptions and outputs to investors, supporting due diligence resulting in US$23.5M in funding and US$5M in R&D service fees.

EDUCATION

100Devs | Technical coding bootcamp covering front-end development, Data Structures & Algorithms, and testing
The Odin Project | Comprehensive online course. HTML, JavaScript, React, Testing, database
Harvard CS50x | 11-week course – memory, data structures, algorithms using C and SQL
Bachelor of Business Administration | Wilfrid Laurier University | Waterloo, ON
